

# S-IDV ID Verification System

## Solution packages that fit your needs

**S-IDV** is a unique system that can allow organisations of any size the ability to provide online verification of their personnel to customers with an internet connected device.

With the ever increasing trend of outsourcing services to third party companies it is becoming difficult for members of the public to identify persons from specific organisations. In the past companies employed their own staff and were easily verified by their uniform or ID, Gas or Telephone engineers for example. This is no longer the case as corporate ID cards are now easily replicated.

**S-IDV** takes a different approach, rather than putting the data in the hand of the contractor, the information is stored in the cloud to enable customers to validate a presented ID card against a secured source. **S-IDV** completely eliminates the existing problem.

Your customers simply logging onto your website they enter the holder's card number. Their details will then be displayed instantly, Photo, Name Position (you choose), providing piece of mind to your customers.
