

# S-Member Membership System

## Solution packages that fit your needs

**S-Member** provided by ID Solutions 2U is a unique product incorporating the ability to support all the latest mobile technologies that enables a club or organisation to access and communicate with members from anywhere, anytime.

### Safeguards your organisation

Verify your member's eligibility just details once, then have peace of mind every time (100% assurance).

### Efficient and cheap communication

Keep in contact with your members using the SMS and email functionality to get the word out.

### Uses consumer hardware

Runs on both PC and mobile platforms enabling you to select your own hardware\* (No costly investment needed)

### Quick and simple

Using contactless technology enables quick retrieval of your member's details when entering your club

### Use anywhere

The data is accessible with any contactless equipped mobile devices having an internet connection.

### Secure and effective

The data is not stored on the device or the card but instead on secure managed servers in the cloud.

## A solution that provides benefit to everyone

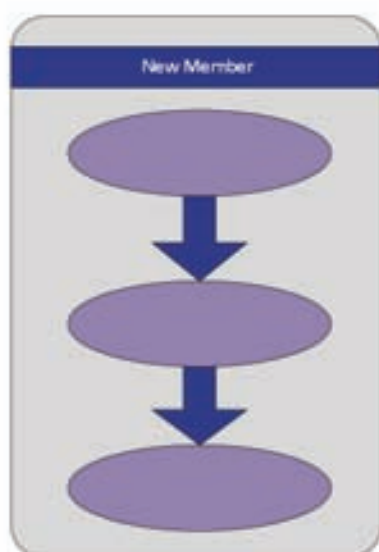

The **S-Member** system has been designed to enable clubs to implement a solution that addresses common problems faced by clubs and organizations today. Examples include:

- Ensuring members are eligible to take part in events
- Members have the necessary insurance in place
- Members are who they say they are
- Health and safety compliance and controls

Implementing this system protects both clubs and its members by ensuring only pre-vetted, age eligible and qualifying members can participate in your activities. With the comprehensive auditing and reporting capabilities your group can instantly generate reports on; interests, anniversaries, birthdays, visit logs etc.

Your new **S-Member** membership system is a gateway to facilitate effective communication, via both SMS and e-mail, with your membership for the benefit of both the club or organization and its members. Examples of this are real-time, targeted and personalized messages sent out via SMS or email to your members inviting them to participate in activities or events.

The platform also allows co-operation with other local **S-Member** schemes to provide notification about safety and security problems which can be broadcast instantly to all participants.

### New Member Enrolment

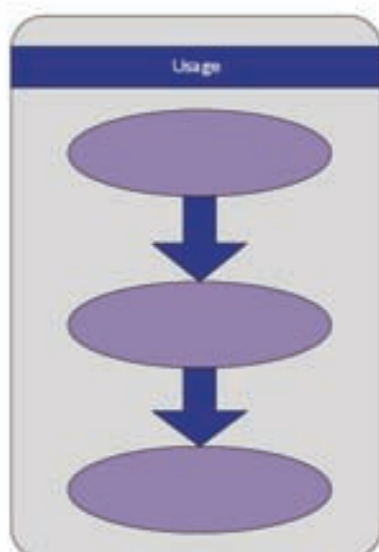

Subscribing a new member is a simple and intuitive process which can be done from almost anywhere. There are no special systems to be managed and it can be used without any technical or computing knowhow.

- Perform your usual checks to ensure the new member meets your eligibility criteria
- Take a photo of the new member using your S-Member enabled mobile device
- Enter your new members details into the system
- Take a photo of the new members identity document
- Save the members record into the S-Member system
- Issue a card to the new member

All the data is stored off the device in a secure location on the Internet. This removes the need to backup, copy and manipulate your membership data and enables easy access to it by authorized members of your team, anytime, anywhere.

In the event of a lost card, all the data remains safely stored on the **S-Member** servers, with the ability to re-associate this data with a new replacement card.

The system ensures that only the valid member can gain access to your club by verifying the card against the photo taken at time of issuance.

### System Usage

Simply scanning the members card using the NFC reader, build into most modern mobile handsets, you can retrieve the members details. This allows you to immediately check the person presenting the card is your enrolled member.
